ROADMAP	7

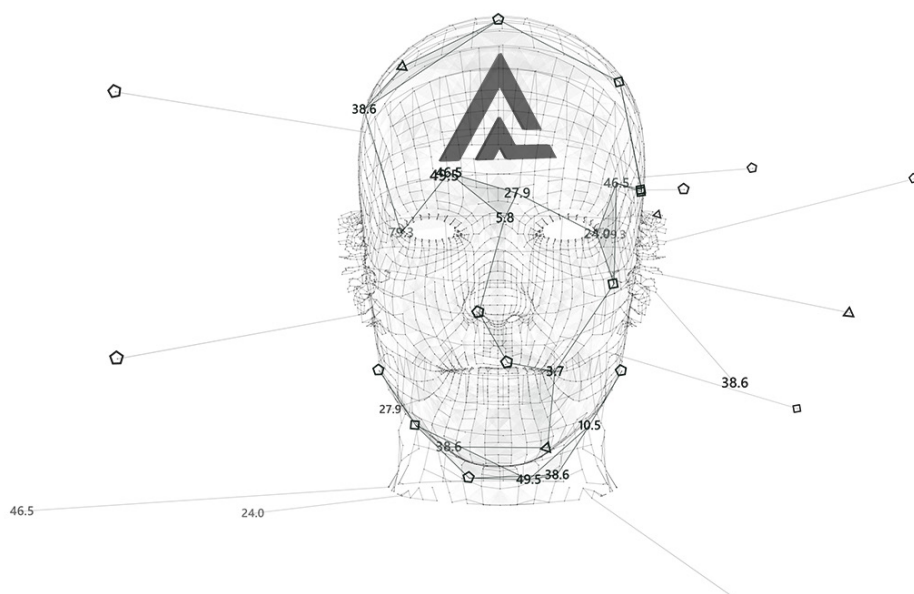

AutoCrypto AI studies the market and detects the most favorable investments for a specified period of time using a temporal analysis of the most relevant coins in the CoinMarketCap ranking (one of the most reliable sources for cryptocurrency research), as well as at the Binance Smart Chain network (part of Binance, one of the most important if not the most important exchange).

Level 2 or higher users of our platform will be provided with the Premium investment tools such as portfolio tracker, listings notifications in advance or liquidity loss attack warnings.

AutoCrypto is an investment app, that uses a combination of artificial intelligence with numerical series, along with polynomial extrapolations to calculate short-to-medium-range of the market major cryptocurrencies with high accuracy.

Every 6 hours the AutoCrypto engine determines if the market is in favourable conditions to invest, and if so, it selects the 2 or 3 best investment opportunities of the day, selecting a percentage to invest in the safest segment of the market (Top 10 currencies) and another percentage in a more risky segment, achieving an optimal balance between safety and investment productivity.

TIERS

In order to access AutoCrypto investment platform, you must first access one of the four tiers offered: Beginner, Starter, Pro or Elite. It is similar to an entry fee, where it will be offered different functionalities depending on the level. There are two ways to enter:

- By purchasing our \$AU token.

Once the amount necessary to access one of the 4 levels available is acquired, all of its functionalities will be unlocked. The option to upgrade to a higher level will always be available by adjusting the amount of AU that you own. You will also be able to withdraw the amount of \$AU that you bought back, thus losing access to the investment platform.

- By making a one-time payment with FIAT.

It will also be possible to enter in one of the 4 tiers by paying a fixed fee using a traditional method. This one-time payment will not be refundable unlike acquisition of the \$AU token.

The required amount of \$AU to be acquired to guarantee access to a tier will be recalculated every 24 hours to compensate market fluctuations. Once the access has been obtained, it will be guaranteed until the membership expires (1 year), regardless of fluctuations in the price of the token.

--	--	---	--

*The number of tokens are recalculated every 24h to match their equivalent FIAT price

* The profit fee can be reduced gradually by vesting your tokens

* The investment cap in tier Elite equals the value of your tokens multiplied by 10, up to a maximum of \$1,000,000

INVESTMENT

Once a user has granted access to an AutoCrypto tier, he must add liquidity to his account so our AI can start investing with his capital. The deposit can be made by FIAT currency transfer (a one-time credit card payment) or by using three of the main cryptocurrencies used for capital exchange: BTC, ETH or BNB. Accepted pairs will be expanded as the project progresses.

Once the liquidity inflow is reflected at the section balance within the control panel, it will be possible to decide the amount to be invested by AI. This amount will be limited by the tier to which the user belongs; Beginner: 100 USD / Starter: 1,000 USD / Pro: 10,000 USD / Elite: 1,000,000.

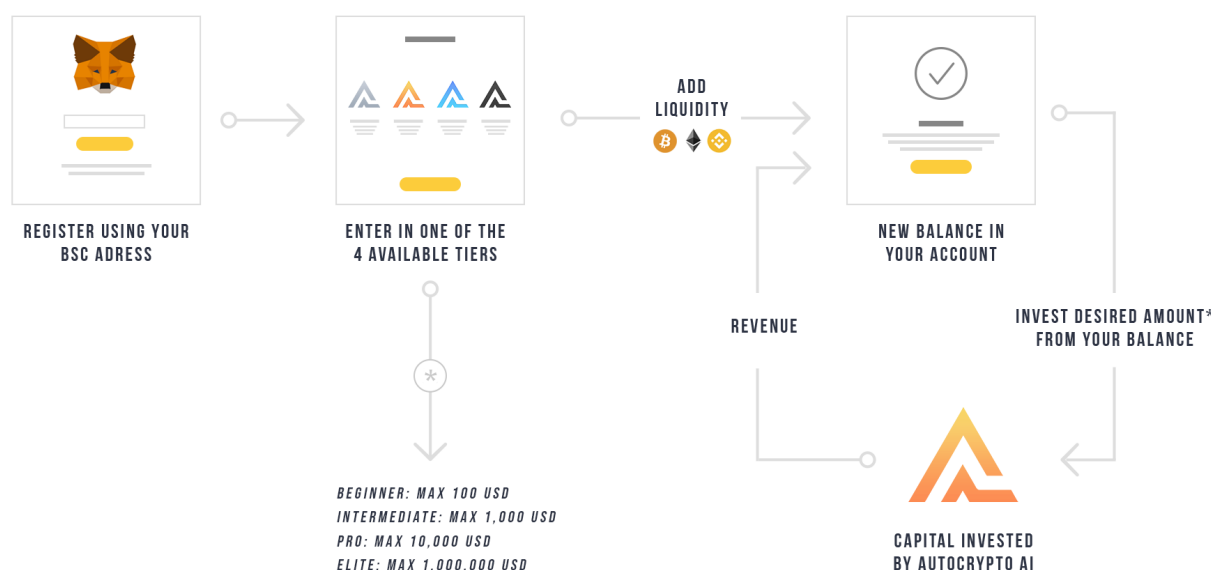

AI will operate with the selected amount every 6 hours. If the user wishes to withdraw the invested funds to his personal account he will have to wait until the next 6-hour cycle ends. However, the funds at his balance that are not invested, can be recovered at any time. The same way as the inflow of money, it can be withdrawn by the same means: FIAT, ETH, BTC and BNB.

Profit Fee

The profit fee is the percentage reduced from the earnings of our AI, they will only be applied when you withdraw, so you can always benefit from compound interests. Each tier has its own profit fee: Beginner, 10% / Intermediate, 9% / Pro, 8% / Elite: 7%. Remember, you can decrease them by vesting your tokens in the application.

There is also a vesting system that enables you to deposit your tokens in a Smart Contract in order to reduce the fee taken from your profits using the investment app.

The maximum reduction for each pool is 2% which is achieved gradually throughout a period of 6 months. In order to achieve the maximum reduction you will have to vest 100% of your tokens, otherwise this period will be longer

BSC NETWORK TOOLS

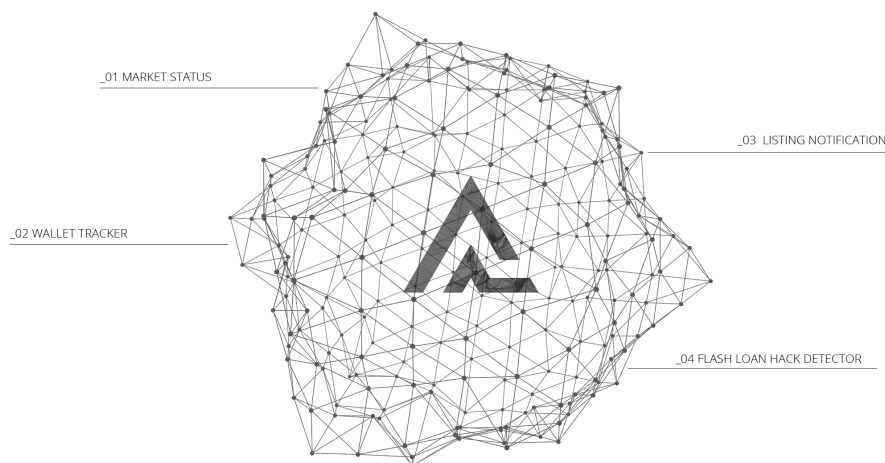

Starting with the Pro tier, the user of AutoCrypto platform will have different tools to get the most out of their personal investments.

Early listing notifications

As the name suggests, you will be notified before anyone else with the listings of the main token exchanges: Binance, Kucoin, Kraken, Hotbit, Bkex, CoinTiger or Coinmarketcap among others.

Wallet tracker

This tool tracks the portfolios considered by our AI most profitable, both by volume and by purchasing level. The so-called whales can make the market fluctuate with their movements, therefore, tracking their movements is critical to predict future fluctuations in asset prices.

Liquidity Loss Attacks

Attacks over vulnerable BSC network tokens are increasingly frequent. Being notified first when this happens can make the difference between being able to make a large profit or losing part of your capital.

Market Status Detector

This feature monitors the Binance Smart Chain market and sends notifications to the end user about its condition. This feature helps to detect the overall sentiment of investors about the market condition and can be used to withdraw capital or transfer it to a stable currency such as USDT.

TOKENOMICS

AutoCrypto token (\$AU) is implemented under Binance Smart Chain network, following the standard model of BEP-20 token. It's a utility IDO token with the following use:

a) AutoCrypto investment services by entering at one of the tiers defined in the Tiers section

Token distribution

There was a private presale with a 13,4% of the available tokens at a rate of 48,000 \$AU per BNB and a public presale with a 44% of the total supply at a rate of 44,000 \$AU per BNB.

32% will go to liquidity and will be open for sale to the public on PancakeSwap in the BSC network. Each transfer of \$AU will have a buy fee of 6%, and a sell fee of 12% which will be distributed as follows:

1/3 Devs, 1/3 Rewards and the last 1/3 will be burnt forever.

■ 13,4% Private Presale
 ■ 5,3% Team
■ 44% Public Presale
 ■ 5,3% Marketing
■ 32% Liquidity

TOKEN INFORMATION

Token Symbol	AU
Max Supply	100,000,000
Initial Price	40,000 \$AU per BNB
Launch Type	Presale
Specifications	IDO token

BUY/SELL FEES 6%/12%

1/3 Devs	1/3 Rewards	1/3 Burnt

EXAMPLES OF WORKINGS

Artificial Intelligence operates every 6 hours due to a balance between performance and efficiency. AutoCrypto's Artificial Intelligence calculates the market's state, and if it's favorable, AI invests the capital selected by the user, which will be selected by the user. One part, 80%, will be invested in the best currency from CMC top 10 (the most stable currencies), and the other 20% it will be bound to the one from the top 200. If all predictions are negative, the capital will be sheltered in Tether (USDT).

In the example shown below, it has been decided to invest 80% of the available investment capital in Bitcoin (BTC), as the top10 CMC cryptocurrency with the highest predicted performance during the period from 00:00 am to 06:00 am. The remaining 20% will be invested in the same time frame in Harmony (ONE).

Artificial Intelligence predicts a 1.86% increase in Bitcoin (BTC) and a 3% increase in Harmony (ONE). Results after 6 hours of investment show it will have 0.44% on BTC and 1.01% on ONE.

Profits will be added to the capital and the AI will recalculate the best opportunities in the market for a new period, from 06:00am to 12:00pm.

ROADMAP

This is our roadmap, from the formation of the idea in March 2021, to its execution and future projection for the year 2022.
